

## LM118/LM218/LM318 Operational Amplifiers

### General Description

The LM118 series are precision high speed operational amplifiers designed for applications requiring wide bandwidth and high slew rate. They feature a factor of ten increase in speed over general purpose devices without sacrificing DC performance.

The LM118 series has internal unity gain frequency compensation. This considerably simplifies its application since no external components are necessary for operation. However, unlike most internally compensated amplifiers, external frequency compensation may be added for optimum performance. For inverting applications, feedforward compensation will boost the slew rate to over 150V/ $\mu$ s and almost double the bandwidth. Overcompensation can be used with the amplifier for greater stability when maximum bandwidth is not needed. Further, a single capacitor can be added to reduce the 0.1% settling time to under 1  $\mu$ s.

The high speed and fast settling time of these op amps make them useful in A/D converters, oscillators, active filters,

sample and hold circuits, or general purpose amplifiers. These devices are easy to apply and offer an order of magnitude better AC performance than industry standards such as the LM709.

The LM218 is identical to the LM118 except that the LM218 has its performance specified over a  $-25^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  temperature range. The LM318 is specified from  $0^{\circ}\text{C}$  to  $+70^{\circ}\text{C}$ .

### Features

- 15 MHz small signal bandwidth
- Guaranteed 50V/ $\mu$ s slew rate
- Maximum bias current of 250 nA
- Operates from supplies of  $\pm 5\text{V}$  to  $\pm 20\text{V}$
- Internal frequency compensation
- Input and output overload protected
- Pin compatible with general purpose op amps

### Fast Voltage Follower

(Note 1)

DS007766-13

**Note 1:** Do not hard-wire as voltage follower ( $R1 \geq 5 \text{ k}\Omega$ )

## Absolute Maximum Ratings (Note 7)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	±20V
Power Dissipation (Note 2)	500 mW
Differential Input Current (Note 3)	±10 mA
Input Voltage (Note 4)	±15V
Output Short-Circuit Duration	Continuous
Operating Temperature Range	
LM118	–55°C to +125°C
LM218	–25°C to +85°C
LM318	0°C to +70°C
Storage Temperature Range	–65°C to +150°C

Lead Temperature (Soldering, 10 sec.)

Hermetic Package	300°C
Plastic Package	260°C

Soldering Information

Dual-In-Line Package	
Soldering (10 sec.)	260°C
Small Outline Package	
Vapor Phase (60 sec.)	215°C
Infrared (15 sec.)	220°C

See AN-450 "Surface Mounting Methods and Their Effect on Product Reliability" for other methods of soldering surface mount devices.

ESD Tolerance (Note 8)	2000V

Output Voltage Swing	$V_S = \pm 15\text{V}$ , $R_L = 2\text{ k}\Omega$	±12	±13		±12	±13		V
Input Voltage Range	$V_S = \pm 15\text{V}$	±11.5			±11.5			V
Common-Mode Rejection Ratio		80	100		70	100		dB
Supply Voltage Rejection Ratio		70	80		65	80		dB

**Note 2:** The maximum junction temperature of the LM118 is 150°C, the LM218 is 110°C, and the LM318 is 110°C. For operating at elevated temperatures, devices in the H08 package must be derated based on a thermal resistance of 160°C/W, junction to ambient, or 20°C/W, junction to case. The thermal resistance of the dual-in-line package is 100°C/W, junction to ambient.

**Note 3:** The inputs are shunted with back-to-back diodes for overvoltage protection. Therefore, excessive current will flow if a differential input voltage in excess of 1V is applied between the inputs unless some limiting resistance is used.

**Note 4:** For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

**Note 5:** These specifications apply for  $\pm 5\text{V} \leq V_S \leq \pm 20\text{V}$  and  $-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$  (LM118),  $-25^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$  (LM218), and  $0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$  (LM318). Also, power supplies must be bypassed with 0.1 μF disc capacitors.

**Note 6:** Slew rate is tested with  $V_S = \pm 15\text{V}$ . The LM118 is in a unity-gain non-inverting configuration.  $V_{IN}$  is stepped from –7.5V to +7.5V and vice versa. The slew rates between –5.0V and +5.0V and vice versa are tested and guaranteed to exceed 50V/μs.

**Note 7:** Refer to RETS118X for LM118H and LM118J military specifications.

**Note 8:** Human body model, 1.5 kΩ in series with 100 pF.

### Operational Amplifier

#### General Description

The LM741 series are general purpose operational amplifiers which feature improved performance over industry standards like the LM709. They are direct, plug-in replacements for the 709C, LM201, MC1439 and 748 in most applications.

The amplifiers offer many features which make their application nearly foolproof: overload protection on the input and output, no latch-up when the common mode range is exceeded, as well as freedom from oscillations.

The LM741C is identical to the LM741/LM741A except that the LM741C has their performance guaranteed over a 0°C to +70°C temperature range, instead of -55°C to +125°C.

**Note 2:** "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Electrical Characteristics (Note 5) (Continued)

**Note 3:** For operation at elevated temperatures, these devices must be derated based on thermal resistance, and  $T_j$  max. (listed under "Absolute Maximum Ratings").  $T_j = T_A + (\theta_{JA} P_D)$ .

Thermal Resistance	Cerdip (J)	DIP (N)	HO8 (H)	SO-8 (M)
$\theta_{JA}$ (Junction to Ambient)	100°C/W	100°C/W	170°C/W	195°C/W
$\theta_{JC}$ (Junction to Case)	N/A	N/A	25°C/W	N/A

- Note 4:** For supply voltages less than  $\pm 15V$ , the absolute maximum input voltage is equal to the supply voltage.
- Note 5:** Unless otherwise specified, these specifications apply for  $V_S = \pm 15V$ ,  $-55^\circ C \leq T_A \leq +125^\circ C$  (LM741/LM741A). For the LM741C/LM741E, these specifications are limited to  $0^\circ C \leq T_A \leq +70^\circ C$ .
- Note 6:** Calculated value from:  $BW \text{ (MHz)} = 0.35/\text{Rise Time}(\mu s)$ .
- Note 7:** For military specifications see RETS741X for LM741 and RETS741AX for LM741A.
- Note 8:** Human body model, 1.5 k $\Omega$  in series with 100 pF.
